Feature Details

PMM RMR Slide Cut

All PMM X-COMP pistols are cut in-house for a Trijicon RMR red dot sight and include a 3D-milled, close-fitting cover plate that can be used when an RMR isn't mounted.

PMM X-COMP Compensator

Machined from a solid piece of 7075-T651 Aluminum, the PMM X-COMP Compensator was designed specifically for the factory threaded barrel. Using a proprietary shim system similar to that on a rifle muzzle device, we are able to install and time the brake without the need for unsightly set or pinch screws.

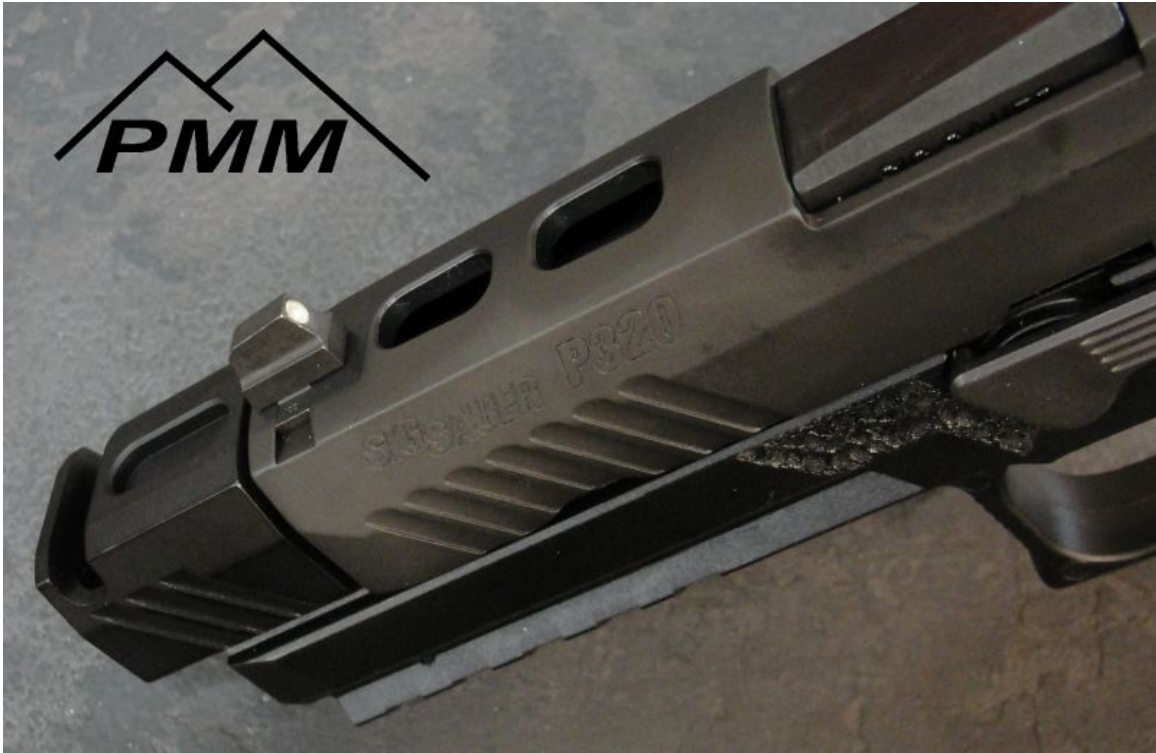

The X-COMP Compensator integrates seamlessly with the X5 grip module and was designed to be as effective as possible, while still being able to function with standard-pressure ammunition.

PMM Medium-Texture Stippling

Requiring hours of handwork to complete, the PMM stippling features forward contact-points and full, 360° grip coverage.

PMM Slide Lightening Ports

Similar to the X5 lightening ports, the PMM lightening ports reduce slide weight, further improving function with the compensator.

Apex Tactical Flat-Faced Action Enhancement Kit

The Apex Tactical Flat-Faced Action Enhancement kit reduces trigger travel by 40%, reduces reset 20%, and reduces pull weight by 20%.

Unique X-COMP and PMM Engraving

Engraved by PMM's state-of-the-art laser engraver, the X-COMP and PMM "Mountains" logos further enhance the custom look of the weapon system.
