

PMM CZ Scorpion Evo 3 S1 S.S.L. Installation Instructions

WARNING!

Prior to handling any firearm be sure that the weapon is cleared and is safe to work with. Additionally, if at any time you do not feel confident in doing the installation of any PMM product, PMM recommends you contact a Licensed Gunsmith for assistance.

Kit Components:

1 or 2 PMM SSL in specified size/.1oz Loctite 242 Blue/x2 M3x10 mm Set Screws/1.5mm Allen Key.

1. Removal of Factory Selector Lever.

Remove the lower trigger module of the Scorpion per the factory user manual recommendations. With the lower trigger module removed, put the gun into the fire position. Take the supplied 1.5mm Allen Key and remove the right side (ejection port) Safety Selector Lever ("SSL") off first by backing out the factory set screw through the access slot in the lower trigger module.

1. Installation of PMM S.S.L.

Taking the supplied PMM Scorpion SSL, slide it down over the right side factory Safety Selector Cam Boss while also holding the left side Safety in the trigger module. Make sure the hole in the PMM SSL is lined up with the hole in the Safety Drum. If the PMM SSL is tight fitting onto the drum, apply some gun oil to ease the installation.

Apply a light amount of the supplied Loctite 242 to the lower portion of the threads on the PMM set screw. Lightly screw the set screw into the PMM SLL. You will want the set screw to "crash" into the base of the PMM SSL making sure it is tight and not protruding above the blind hole in the PMM SSL. **(Image#1)**

Repeat the process of removal and installation for the left side (non ejection port) side of the Scorpion.

Once both PMM SSL's are installed, reassemble the Scorpion and perform a safety function test with the weapon empty.

Image #1

Final Note: Based on initial testing, the PMM SSL's should fit the CZ Scorpion Evo 3 S1 weapon system. If for any reason you are having issues, please contact me. **DO NOT FORCE THE FIT OF ANY PMM COMPONENTS ONTO YOUR RIFLE OR PISTOL!**
